

Tacton CPQ Application Configuration

ACADEMY-TACTONCPQ-201

Tacton CPQ can be configured to handle new business scenarios. Academy-Tacton-CPQ-201 gives both theoretical overview and practical experience in Tacton CPQ Administration on how that is done. Additionally, the interfaces to the product configuration model, pricing model, quotation templates and integrations are presented, as the configurable object model provides the common ground for these.

The course consists of a mix of both theoretical parts as well as practical hands-on exercises.

TYPICAL STUDENT

Application Administrator and others (product, pricing and document experts) that will be working in CPQ Administration (except when limited to data updates). Anyone that needs a 'complete picture' of Tacton CPQ such as a System Administrator, Solution Architect, or Integration designer/developer.
