# Tacton CPQ Connect to Anything

Simple connectivity. Accelerate value and empower your team to manage integrations seamlessly, without heavy reliance on IT resources

Siloed and poorly governed data is a real burden to manufacturing companies. With information spread out in your PLM, ERP, CRM, PIM, CPQ and CAD systems, your sales and order fulfillment teams will base critical business decisions on wrong or outdated data or be forced to collect data through slow and manual processes. Tacton CPQ's *Connect to Anything* simplifies integrations without heavy reliance of IT or middleware. Powered by Workato, Tacton CPQ offers 600+ pre-built connectors for quick and efficient automation. With no-code integrations, Connect-to-Anything links your Tacton CPQ with various enterprise applications, databases, and services. With a fully SaaS-hosted solution and with Tacton as the sole supplier, we eliminate the need for separate middleware and IT involvement.

Lower costs
Reduce expenses for integration implementation and maintenance

Faster time to value
Achieve quicker results with ready-made connectors and recipes

Fewer integration errors
Empower business owners to build and maintain integrations themselves, minimizing errors

Reduce reliance on IT
Build and maintain integrations faster and at a lower cost without involving IT teams

Single-Vendor Convenience
Save costs and reduce complexity with one comprehensive contract through Tacton

Enhanced CPQ Investment
Realize more value from your CPQ investment with integrations available as early as project phase 1

Key Features
